Università degli Studi di Milano

Dr. Marta Castrica

The recovery of food for animal feed is totally in line with the food hierarchy, where sent to animal feed is still in the most preferable action to reduce food surplus and waste, together with prevention and the donation to the COs.
FEED FROM FOOD OFFERS:

A NEW SERVICE TO THE COMPANIES

The service offered by Feed from Food fully responds to the growing demand for solutions aimed at improving the efficiency and sustainability of the agri-food supply chain, providing an innovative and alternative solution.

ONE PRODUCT: PET FOOD

The final product can be used as feed (ingredient and/or pet food and/or snack) for pet animals. Feed from Food product has a high nutritional quality and is in accordance with food and feed safety aspects required by the EU legal framework.
INNOVATIVE
Creation of a “New” supply chain and a product that currently does not exist. (Patent Pending for both the technology and the final product).

IMPACT
The construction of a Feed from Food system can take place inside closed spaces because there are no problems of emissions and requires little construction space and has a low energy consumption.

REPLICABLE
The Feed from Food technology is scalable, is able to process different food matrices and quantities and can be exported in whatever other countries.

CURRENT
Feed from Food has just completed the installation of the first pilot plant and is testing the first productions.
We are able to transform Food Waste into a Resource!
